

ENGINEERING FOR NONWOVENS

PRESSENOTIZ

June 2022

Large Order for DiloGroup

At the beginning of this year, DiloGroup received a large order from AstenJohnson, a global textile manufacturer, headquartered in Charleston, South Carolina, USA, comprising three complete webforming and needling lines for the production of industrial needled nonwovens. According to AstenJohnson the various applications of material to be manufactured on the Dilo lines are: automotive, aerospace, filtration, pipeliners and other technical industrial segments.

Dilo is delighted to continue its cooperation with longterm customer AstenJohnson having facilities in New Hampshire, South Carolina, Missouri and soon Texas, and sees this as the continuation of our strong longterm commitment to serve the US market with state-of-the-art production lines including our comprehensive service for delivery, commissioning, start-up and after-sales-service through the Dilo facility in Charlotte, North Carolina.

“During the last years we have seen a gain of momentum in the US needlepunching industry with continued investment in complete lines for the production of technical and industrial textiles,” says Casey Kivett, VP sales of Dilo Inc. Domenico Craviolo, sales manager US, adds that “together with the customer a demanding engineering process was established to include modern modules of industry 4.0 in order to increase control and improve monitoring of the complete lines.”
